

(d) providing an analysis based on the first and second sets of management information.

32. The method according to claim 31, further comprising sending an event message, in a data format compatible with the second management system, to the second management system.

33. The method according to claim 32, wherein the event message is sent when the message relates to an entity managed by the second management system.

34. The method according to claim 31, wherein the first management system includes a network management platform and the second management system includes a system management platform.

35. The method according to claim 31, wherein the step of providing includes a step of correlating the first and second sets of management information.

36. The method according to claim 31, further comprising a step of filtering management information by the first management system.

37. The method according to claim 31, further comprising forwarding, in a data format compatible with the second management system, to the second management system.

38. The method according to claim 31, further comprising providing an alarm to a user based on the providing step.

39. The method according to claim 31, further comprising maintaining a database of a plurality of probable causes, and, based on the providing step, displaying at least one of the plurality of probable causes to a user.
